題目(和文)	
Title(English)	Slot Coupling Control and Feeder Design for Travelling Wave Excitation of Uniform Aperture Illumination in Radial Line Slot Antennas
著者(和文)	NguyenXuan Tung
Author(English)	Xuan Tung Nguyen
出典(和文)	学位:博士（工学）, 学位授与機関:東京工業大学, 報告番号:甲第9973号, 授与年月日:2015年9月25日, 学位の種別:課程博士, 審査員:安藤　真,廣川　二郎,水本　哲弥,西方　敦博,阪口　啓,西山　伸彦,小西　善彦
Citation(English)	Degree:, Conferring organization: Tokyo Institute of Technology, Report number:甲第9973号, Conferred date:2015/9/25, Degree Type:Course doctor, Examiner:,,,,,,
学位種別(和文)	博士論文
Category(English)	Doctoral Thesis
種別(和文)	要約
Type(English)	Outline

Doctoral Dissertation

Slot Coupling Control and Feeder Design for Travelling Wave Excitation of Uniform Aperture Illumination in Radial Line Slot Antennas

June 2015

Under the supervision of

Professor Makoto Ando

and

Professor Jiro Hirokawa

Presented by

Nguyen Xuan Tung

Department of Electrical Electronic Engineering

Tokyo Institute of Technology

Outline

Chapter 1. Introduction **1**

1.1 History of Antennas and Wireless Communications 1

1.2 Development of Waveguides 2

1.3 Radial Line Slot Antennas 5

1.3.1 History and Development of RLSAs 7

1.3.2 Existing Problems with Over-sized Radial Lines 13

1.3.2.1 Instability of Over-sized Waveguides 14

1.3.2.2 Analysis Tools for Electrically Large Arrays 16

1.3.2.3 Travelling Wave Operation 16

1.3.3 From the Applications View Point 17

1.4 Outline of the Remaining Chapters 17

References 20

Chapter 2. Control of Quasi-Cylindrical Waves in Radial Lines for Elliptical Beam Forming **31**

2.1 Introductory Remarks 31

2.2 Concept of Elliptical Beam RLSA (EB-RLSA) 33

2.2.1 General Structure of EB-RLSA 34

2.2.2 Feeding Structure 35

2.2.3 Aperture Shape 37

2.3 Slot Array Design and Optimization 38

2.3.1 Slot Array Design for Quasi-elliptical Aperture 38

2.3.2 Numerical Optimization for Uniform Aperture Illumination 40

2.4 Predicted Radiation Characteristics 42

2.5 Experimental Results 42

2.6 Concluding Remarks 48
References 50

Chapter 3. A High Gain and Lightweight RLSA with Honeycomb Structure for Space Exploration 52

3.1 Introductory Remarks 52
3.2 Antenna Structure 54
3.3 Analysis of Honeycomb Structures in Ka-band 56
3.3.1 Anisotropic Problem of Large-Cell Honeycomb Structures 58
3.3.2 Estimations of Effective Permittivity 61
3.3.3 Estimations of Loss Factors 63
3.3.3.1 Inner-field Measurements 63
3.3.3.2 Rectangular Waveguide Measurements 64
3.3.3.3 Test Antennas Measurements 66
3.4 Fast Design/Analysis Procedure using an Equivalent Double Layer Model 69
3.4.1 Equivalent Double Layer Model 69
3.4.2 Fast Design/ Analysis Procedure 71
3.4.3 Equivalent Parameters Determined by a Small 30cm Test Antenna 72
3.4.3 Slot Length Correction 76
3.5 Antenna Design and Experimental Results 78
3.5.1 Feeding Structure 78
3.5.2 Slot Array Design 80
3.5.3 Experimental Results 80
3.6 Concluding Remarks 88
References 90

Chapter 4. Slot Coupling Control for the Design of mm-Wave RLSAs with Lossy Waveguides 94

4.1 Introductory Remarks 94
4.2 Gain Optimization by Slot Coupling Control 95
4.2.1 Energy Conservation Models 97
4.2.2 Coupling Factors 98
4.3 Numerical Results 101
4.4 Experimental Results 106
4.3.1 RO4003C™ Characteristics at 60GHz by Outward Travelling Wave Measurement in a Radial Line 106
4.3.2 Designs and Measurements of 400mmϕ RLSAs 108
4.5 Concluding Remarks 110
References 111

Chapter 5. RLSAs for Short Range Communications 113

5.1 Introductory Remarks 113
5.2 ISI Problem in Short Range Communications 115
5.3 Amplitude Taper Design of RLSA for ISI Reduction 117
5.4 Prototype Design and Experimental Results 120
5.5 Concluding Remarks 125
References 126

Chapter 6. Conclusion 127

6.1 Summary of Preceding Chapters 127
6.2 Remarks for Futures Studies 129
References 132

Acknowledgement 133
Publication List 134
Appendix A Mathematica Code 139
Appendix B Mathematical Form of Weighting Functions 142
