学位種別(和文)	博士論文
Category(English)	Doctoral Thesis
種別(和文)	要約
Type(English)	Outline

In this thesis, I reported three studies which investigated cognitive process of social interaction in humans by focusing on embodiment. In Study 1, I studied how physical proximity to others influenced subjects' sadness and loneliness evoked in social exclusion. In Study 2, I investigated how the embodied cognition of tactile perception evoked when touching or being touched by others affected in social context, extending results in previous studies of the effect of physical warmth on mental warmth. In Study 3, I showed the differences of communication among attachment styles related to physical lateral preferences with subject's partners. In sum, the studies I reported here investigated social cognitive process of interpersonal interaction, focusing on embodiment, elucidating aspects of embodied cognition in the social context.
