題目(和文)	Simple model for tall buildings with frequency-dependent viscoelastic damper in wind-resistant design
Title(English)	Simple model for tall buildings with frequency-dependent viscoelastic damper in wind-resistant design
著者(和文)	張庭維
Author(English)	Ting-Wei Chang
出典(和文)	学位:博士(学術), 学位授与機関:東京工業大学, 報告番号:甲第12940号, 授与年月日:2024年9月20日, 学位の種別:課程博士, 審査員:佐藤 大樹,山中 浩明,盛川 仁,石原 直,山崎 義弘
Citation(English)	Degree:Doctor (Academic), Conferring organization: Tokyo Institute of Technology, Report number:甲第12940号, Conferred date:2024/9/20, Degree Type:Course doctor, Examiner:,,,,
学位種別(和文)	博士論文
Category(English)	Doctoral Thesis
種別(和文)	要約
Type(English)	Outline

Simple model for tall buildings with frequency-dependent viscoelastic damper in wind-resistant design

by
Ting-Wei Chang

1 Introduction

- 1.1 Background of the study
- 1.2 Behavior of the VE damper
- 1.3 Wind-induced responses for VE-damped buildings
 - 1.3.1 Fractional derivative and integer derivative models
 - 1.3.2 Power spectral method
 - 1.3.3 The simplest model of VE systems
- 1.4 objectives and organization of the study
- References

2 Understanding Frequency Dependency of VE-damped Systems: Fractional Derivative and Integer Derivative Models

- 2.1 Introduction
- 2.2 Target building and numerical models .
- 2.3 Basic settings of numerical models with VE damper
- 2.4 FD model and ID models
 - 2.4.1 FD model
 - 2.4.2 4-Element model
 - 2.4.3 6-Element model
- 2.5 Characteristics of the VE systems under the steady-state response .
- 2.6 Conclusions
- Appendix 2A Frequency sensitivity of the damping coefficient in the VE system
- References

3 Wind-induced Responses of Frequency Dependency of VE-damped Systems

3.1 Introduction

3.2 Wind force

3.3 Wind-induced response of FD systems

3.4 Response comparison between ID systems and FD system in along-wind

3.5 Response comparison between ID systems and FD system in across-wind

3.6 Conclusions

Appendix 3A Numerical integration method of the fractional derivative model

Appendix 3B Effect of window time

References

4 Prediction on Wind-induced Responses of Frequency-sensitive VE-damped Systems by Power Spectral Method

4.1 Introduction

4.2 Analytical model and wind force

4.2.1 Target building and the SDOF model

4.2.2 Fractional derivative model of VE damper

4.2.3 Wind force

4.3 Prediction method for the wind-induced responses of the VE system

4.4 Results and discussion

4.4.1 Power spectral density and mean square value of wind-induced responses

4.4.2 Total input energy of wind-induced responses

4.4.3 Total energy dissipation of wind-induced responses

4.5 Conclusions

Appendix 4A Derivation procedure of the equivalent damping ratio of the system

Appendix 4B Power spectral method and the derivation of the transfer function of the system with the frequency-dependent VE damper

References

5 Using the Global Damping (GD) Model to Predict Wind-induced Responses of VE-damped Systems

5.1 Introduction

5.2 Target building and analytical model

5.2.1 Target building

5.2.2 Fractional derivative (FD) model of VE damper

5.2.3 Resonance-frequency-based global damping (RF-GD) model

5.2.4 Zero-crossing-rate-based global damping (ZR-GD) model

5.3 Analytical wind and the comparison of wind-induced responses

5.3.1 Analytical wind

5.3.2 Wind-induced displacement of VE models

5.3.3 Maximum wind-induced responses

5.3.4 Standard deviation of wind-induced responses

5.4 Discussion

5.4.1 Comparison of zero-crossing frequency and resonance frequency in power spectral density

5.4.2 Comparison of the equivalent damping ratio of ZR-GD and RF-GD models

5.5 Conclusions

Appendix 5A Peak factor of wind-induced responses

References

6 Design Method for VE Damper with ZR-GD model considering Frequency Dependency

6.1 Introduction

6.2 Design method for VE damper

6.3 Discussion of design examples

6.3.1 Example 1

6.3.2 Example 2

6.3.3 Example 3

6.4 Conclusions

Appendix 6A Modal analysis

Appendix 6B Wind loading of AIJ recommendation

Appendix 6C Verification of design wind load with the ZR-GD model

References

7 Conclusions

7.1 Contribution of this study

7.2 Future works
