題目(和文)	セル生産システムのセル形成とオペレーター配置に関する研究
Title(English)	Research on Multi-objective Cell Formation and Worker Assignment for Cellular Manufacturing System
著者(和文)	呉浪
Author(English)	Lang Wu
出典(和文)	学位:博士(工学), 学位授与機関:東京工業大学, 報告番号:甲第10244号, 授与年月日:2016年3月26日, 学位の種別:課程博士, 審査員:鈴木 定省,伊藤 謙治,井上 光太郎,水野 眞治,中田 和秀
Citation(English)	Degree:Doctor (Engineering), Conferring organization: Tokyo Institute of Technology, Report number:甲第10244号, Conferred date:2016/3/26, Degree Type:Course doctor, Examiner:,,,,
学位種別(和文)	博士論文
Category(English)	Doctoral Thesis
種別(和文)	要約
Type(English)	Outline

# Thesis Outline

**Title:** Research on Multi-objective Cell Formation and Worker Assignment for Cellular Manufacturing System

## CHAPTER 1 Introduction

### 1.1 Research Background

- 1.1.1 Introduction of Cellular Manufacturing System
- 1.1.2 Advantages and Disadvantages of Cellular Manufacturing System
- 1.1.3 Differences and Similarities between Cellular Manufacturing and Japanese Cell Manufacturing
- 1.1.4 Cell Formation for Cellular Manufacturing System
- 1.1.5 Worker Assignment for Cellular Manufacturing System

### 1.2 Research Motivation and Purpose

### 1.3 Structure of This Dissertation

CHAPTER 2 Improved Similarity Coefficient Method (SCM) for Cell Formation (CF) with Considering Operation Sequences and Times

### 2.1 Introduction of Cell Formation by Similarity Coefficient Method

- 2.1.1 Problem Statement
- 2.1.2 Procedure Statement of SCM

### 2.2 Previous Researches on Application of SCM in CF

- 2.2.1 Review of Calculation Methods of Similarity Coefficient
- 2.2.2 Review of Similarity Coefficient-Based Clustering Algorithm

### 2.3 Objective of This Chapter

### 2.4 Description of the Improved SCM

- 2.4.1 Introduction of an Existing SCM
- 2.4.2 Improved Model of SCM

### 2.5 Numerical Examples and Computational Performance

- 2.5.1 An Example for Detailed Descriptions on the Improved SCM

## 2.5.2 Other Examples from Previous Researches

## 2.6 Conclusions and Contributions

# CHAPTER 3 Two Phase Methodology for Cell Formation with Considering Trade-off between Machine Replication and Material Inter-cell Movement

## 3.1 Introduction of Cell Formation by a Two-phase Methodology

### 3.1.1 Problem Statement

### 3.1.2 Method Statement and Overview

## 3.2 Objective of This Chapter

## 3.3 Solution Algorithm

### 3.3.1 Phase I -Part Family Identification

### 3.3.2 Phase II - Decomposed Mathematical Model for Machine Assignment

## 3.4 Computational Experiments

### 3.4.1 Data Generation

### 3.4.2 First Example

### 3.4.3 Second Example

### 3.4.4 Other Example Problems

## 3.5 Conclusions and Contributions

# CHAPTER 4 A New Mathematical Model and Numerical Analysis for Assigning Cross-trained Worker to Manufacturing Cell

## 4.1 Introduction of Worker Assignment

### 4.1.1 Introduction of Three Types of Manufacturing Cells

### 4.1.2 Problem Statement

## 4.2 Literature Review

## 4.3 Objective of This Chapter

## 4.4 Proposed Model

### 4.4.1 Assumptions

### 4.4.2 Notations

#### 4.4.3 Model Objective Function and Constraint

### 4.5 Numerical Experiments

#### 4.5.1 An Example for Illustration of Proposed Model

#### 4.5.2 Comparison of Throughput between Divisional Cell and Rotating Cell

#### 4.5.3 Factorial Experiments Design

### 4.6 Analysis and Discussion

#### 4.6.1 Results of RMTP and Influence Factor Analysis

#### 4.6.2 Results of MRTP and Influence Factor Analysis

### 4.7 Conclusions and Contributions

## CHAPTER 5 Conclusions, Limitations and Future Research

### 5.1 Summary of the Research

### 5.2 Contributions and Limitations

### 5.3 Future Research
