題目(和文)	
Title(English)	Li-Al-Si-S based lithium superionic conductors for all-solid-state batteries
著者(和文)	黄文澤
Author(English)	Wenze Huang
出典(和文)	学位:博士(理学), 学位授与機関:東京工業大学, 報告番号:甲第11079号, 授与年月日:2019年3月26日, 学位の種別:課程博士, 審査員:菅野 了次,平山 雅章,原 正彦,荒井 創,北村 房男,中村 二郎
Citation(English)	Degree:Doctor (Science), Conferring organization: Tokyo Institute of Technology, Report number:甲第11079号, Conferred date:2019/3/26, Degree Type:Course doctor, Examiner:,,,,,
学位種別(和文)	博士論文
Category(English)	Doctoral Thesis
種別(和文)	要約
Type(English)	Outline

**Li–Al–Si–S based lithium superionic  
conductors for all-solid-state batteries**

Wenze Huang

**Dissertation**

Submitted to the Major of Energy Science and Engineering

Department of Chemical Science and Engineering

School of Materials and Chemical Technology

Tokyo Institute of Technology

In Partial Fulfillment of the Requirement for the Degree of

**Doctor of Science**

**Tokyo Institute of Technology**

**January 2019**

# Acknowledgments

Here, I would like to appreciate the help and support I received from many people and organizations. Without them, my carrier cannot reach as far as this stage.

First of all, I would like to give my sincerest thanks to Prof. Ryoji Kanno of Tokyo Institute of Technology for providing me an opportunity to study all-solid-state battery in his warm and sweet laboratory. I am impressed and thankful for his patient and knowledgeable guidance, kindly and informative discussions, and continuous and selfless supports. It is hard to imagine that I can fulfill my doctor course without his countless helps both in academic and daily life. Also, I am very thankful to Associated Prof. Hirayama Masaaki, Assistant Prof. Suzuki Kota and Assistant Prof. Satoshi Hori for their helpful guidance and valuable discussions on my research. Particular thanks go to Assistant Prof. Suzuki Kota for his compatible suggestions and constructive comments on the publication of academic papers and the writing of this thesis.

I wish to thank Prof. Masahiko Hara, Prof. Hajime Arai, Prof. Jiro Nakamura, and Associated Prof. Fusao Kitamura for their review of this thesis, sincerely.

I am grateful for the help and encouragement I received from the former and present members in Kanno Laboratory. Many thanks to Zheng, Ken, Li, Sun, and Zhao, who help me in familiar with the lifestyles in Japan; to Hikima and Hata, who study together with me from the master course to the doctor course so far; to Iizuka, Hosokawa, and Kubo, who help me go through the document tasks from the university; and to the others, for their earnest and friendly help whenever I have problems in both research and daily life.

This work was partly supported by the Post-LiEAD project of the New Energy and Industry Technology Development Organization (NEDO) and a Grant-in-Aid for Scientific Research (S) from the Japan Society for the Promotion of Science (No. 17H06145). The synchrotron radiation experiments were carried out as part of a project approved by the Japan Synchrotron Radiation Institute (JASRI) (Proposal No. 2016BL1778). The neutron-scattering experiment was approved by the Neutron Scattering Program Advisory Committee of IMSS, KEK (Proposal No. 2014S10). I also want to thank the Associate Prof. Masao Yonemura of the High Energy Accelerator Research Organization (KEK) for helping in neutron diffraction measurement.

I want to acknowledge the financial support I received from Ministry of Education, Culture, Sports, Science and Technology (MEXT) and the project of Academy for Creative Education of Environment and Energy Science (ACEEES). I would also express my thanks to Prof. Martin Winter of Münster University in Germany, who offers me a great chance to work with talented scientists and experts in the field of lithium-ion battery. Thanks to Prof. Ryoji Kanno again for his kindly helps in applying for the scholarship, the project, and the internship.

In the end, I want to extend my thanks to all my family members from the bottom of my heart, especially my father Mr. Huang and my mother Mrs. Lin for their selfless love, continuous understanding, and encouragement, without which I cannot accomplish the achievements so far.

January 2019  
Wenze Huang

# Contents

<b>CHAPTER ONE: GENERAL INTRODUCTION.....</b>	<b>1</b>
1-1 CHALLENGES FOR LI ION BATTERIES.....	1
1-2 ALL-SOLID-STATE LI BATTERY .....	4
1-3 OVERVIEW OF SOLID-STATE ELECTROLYTES .....	5
1-3-1 Glassy ion conductors .....	5
1-3-2 Crystalline ion conductors .....	6
1-4 CRYSTALLINE SUPERIONIC CONDUCTORS .....	7
1-4-1 Oxides .....	7
1-4-2 Sulfides .....	8
1-5 RESEARCH OBJECTIVES.....	11
1-5-1 Issues to be addressed .....	11
1-5-2 Thesis organization .....	12
1-6 FIGURES AND TABLES.....	14
REFERENCES .....	22
<b>CHAPTER TWO: EXPERIMENTAL.....</b>	<b>33</b>
2-1 SYNTHESIS .....	33
2-1-1 Solid-state reaction .....	33
2-1-2 Quenching method.....	34
2-2 PHASE IDENTIFICATION AND STRUCTURE ANALYSIS.....	35
2-2-1 Powder X-ray diffraction (XRD) measurements .....	35
2-2-2 Synchrotron X-ray diffraction (SXR) measurements .....	35
2-2-3 Neutron Powder diffraction (NPD) measurements.....	36
2-2-4 Rietveld analysis .....	36
2-3 MORPHOLOGY AND ELEMENT DISTRIBUTION.....	39
2-3-1 Scanning electron microscope (SEM) .....	39
2-3-2 Energy-dispersive X-ray spectroscopy (EDS).....	39
2-4 DIFFERENTIAL THERMAL ANALYSIS (DTA) .....	39
2-5 IONIC CONDUCTIVITY MEASUREMENTS.....	40
2-6 CHARGE-DISCHARGE MEASUREMENT.....	42
2-7 FIGURES AND TABLES.....	44

REFERENCES .....	48
------------------	----

**CHAPTER THREE: SYNTHESIS AND ELECTRICHEMICAL PROPERTIES OF THIO-LISICONS IN THE  $LI_{4+x}AL_xSI_{1-x}S_4$  SYSTEM..... 49**

3-1 INTRODUCTION .....	49
3-2 EXPERIMENTAL .....	51
3-3 RESULTS AND DISCUSSION .....	52
3-3-1 Synthesis and phase identification.....	52
3-3-2 Electrochemical properties .....	55
3-3-3 Comparison with reported thio-LISICONS in this system.....	55
3-4 CONCLUSION.....	56
3-5 FIGURES AND TABLES.....	57
REFERENCE .....	64

**CHAPTER FOUR: SUPERIONIC LITHIUM CONDUCTOR WITH A CUBIC ARGYRODITE-TYPE STRUCTURE IN THE LI-AL-SI-S SYSTEM ..... 66**

4-1 INTRODUCTION .....	66
4-2 EXPERIMENTAL .....	67
4-3 RESULTS AND DISCUSSION.....	69
4-3-1 Materials synthesis.....	69
4-3-2 Compositional and structural analysis .....	71
4-3-3 Electrochemical properties .....	73
4-4 CONCLUSION.....	74
4-5 FIGURES AND TABLES.....	76
REFERENCE .....	88

**CHAPTER FIVE: PHASE DIAGRAM OF THE PSEUDO-BINARY  $LI_5ALS_4-LI_4SIS_4$  SYSTEM..... 92**

5-1 INTRODUCTION .....	92
5-2 EXPERIMENTAL .....	93
5-3 RESULTS AND DISCUSSION.....	94
5-3-1 Compostions and structure data.....	94
5-3-2 DTA measurements .....	95
5-3-3 Phase diagram.....	97

5-4 CONCLUSION.....	98
5-5 FIGURES AND TABLES.....	99
REFERENCES .....	103

**CHAPTER SIX: THE EFFECT OF OXYGEN SUBSTITUTION ON LITHIUM ARGYRODITE IN THE LI-AL-SI-S-O SYSTEM ..... 105**

6-1 INTRODUCTION .....	105
6-2 EXPERIMENTAL .....	106
6-3 RESULTS AND DISCUSSION.....	107
6-3-1 Materials synthesis.....	107
6-3-2 Electrochemical properties .....	109
6-3-3 Structure analysis.....	110
6-4 CONCLUSION.....	112
6-5 FIGURES AND TABLES.....	113
REFERENCE .....	120

**CHAPTER SEVEN: SUMMARY ..... 124**
