題目(和文)	Dion-Jacobson型層状ペロブスカイトにおける酸化物イオン伝導
Title(English)	Oxide-Ion Conduction in the Dion-Jacobson-Type Layered Perovskites
著者(和文)	張文銳
Author(English)	Wenrui Zhang
出典(和文)	学位:博士(理学), 学位授与機関:東京工業大学, 報告番号:甲第11379号, 授与年月日:2020年3月26日, 学位の種別:課程博士, 審査員:八島 正知,河野 正規,植草 秀裕,沖本 洋一,前田 和彦
Citation(English)	Degree:Doctor (Science), Conferring organization: Tokyo Institute of Technology, Report number:甲第11379号, Conferred date:2020/3/26, Degree Type:Course doctor, Examiner:,,,,,
学位種別(和文)	博士論文
Category(English)	Doctoral Thesis
種別(和文)	要約
Type(English)	Outline

Oxide-Ion Conduction in the Dion–Jacobson -Type Layered Perovskites

By

Wenrui ZHANG

Supervised by Prof. Masatomo Yashima

Submitted for the degree of Doctor of Science at Tokyo Institute
of Technology

Department of Chemistry

February 2020

INDEX

<u>Chapter 1</u>	<u>Introduction</u>
1.1	<u>Background</u>
1.1.1	<u>Energy and the Environment</u>
1.1.2	<u>Oxide-ion conductor</u>
1.1.3	<u>Perovskite and Perovskite-related Oxides</u>
1.2	<u>Previous Studies</u>
1.2.1	<u>Oxide- Ion Conduction in Perovskite or Perovskite-related Structures</u>
1.2.2	<u>Properties of Dion–Jacobson Type Layered Perovskites</u>
1.3	<u>Crystal Structure Analysis</u>
1.3.1	<u>Synchrotron X-ray Powder Diffraction</u>
1.3.2	<u>High-Temperature Synchrotron X-ray Powder Diffraction</u>
1.3.3	<u>Neutron Diffraction</u>
1.3.4	<u>High-Temperature Neutron Diffraction</u>
1.3.5	<u>Rietveld Refinement</u>
1.4	<u>Electrical Properties Measurement</u>
1.4.1	<u>Temperature Dependence of Total Electrical Conductivities</u>
1.4.2	<u>The Oxygen Partial Pressure Dependence of Total Electrical Conductivities</u>

1.4.3	Oxygen Concentration Cell Measurements
1.4.4	Impedance Spectroscopy Measurements
1.5	Bond Valence-based Energy Calculation
1.6	Maximum-Entropy Method Analysis
1.7	Density Functional Theory Calculation	
1.8	Figures and Tables
1.9	References
Chapter 2	Dion Jacobson type CsBi₂Ti₂NbO₁₀-based Materials as Oxide Ion Conductors
	Abstract
2.1	Introduction
2.2	Experimental
2.2.1	Synthesis and Characterization
2.2.2	Electrical Conductivity Measurements
2.2.3	Neutron and Synchrotron X-ray Diffraction Measurements
2.2.4	Bond-valence-based Energy Calculation
2.2.5	Maximum-Entropy Method Analysis
2.2.6	Oxygen Concentration Cell Measurements
2.2.7	Improved Oxide-Ion Conductivity by Doping

2.3	Results and Discussion
2.4	Conclusion
2.5	Outlook
2.6	Figures and Tables
2.7	References

Chapter 3 Dion Jacobson type CsR₂Ti₂NbO₁₀-based Materials as Oxide Ion Conductors (R are earth)

Abstract:	
3.1	Introduction
3.2	Experimental
3.2.1	Synthesis and Characterization
3.2.2	Electrical Conductivity Measurements
3.2.3	Neutron and Synchrotron X-ray Diffraction Measurements
3.2.4	Density Functional Theory Calculation
3.2.5	Investigation of Oxide-Ion Diffusion Pathways
3.2.6	Improved Oxide-Ion Conductivity by Doping
3.3	Results and Discussion
3.4	Conclusion
3.5	Figures and Tables

3.6 References

Chapter 4 **Conclusion and Future Work**

Acknowledgements

Acknowledgements

I cordially wish to express my gratitude to my supervisor Prof. M. Yashima for his invaluable advice and useful suggestions over the whole works in the study. I truly appreciated the fact that his office door was always open for me from morning to night even at weekends. I have learned so much from him, such as how to make scientific writing logically and how to make a clear presentation. I have received many helps from him to go through the difficulty encountered when living abroad. He also given me a lot of kind helps and suggestions for the job-hunting. I will always be grateful for the positive influence and considerate helps from him.

I would like to thank Prof. M. Kawano, Prof. K. Maeda, Prof. Y. Okimoto and Prof. H. Uekusa of Tokyo Institute of Technology for their useful comments and fruitful discussions on the thesis paper. I wish to thank Dr. K. Fujii and Dr. E. Niwa of Tokyo institute of Technology and all members of Prof. Yashima's laboratory for their kind-hearted assistance for sharing joyful memories during my work and study. I gratefully acknowledge the funding received from the "Tonen International Scholarship Foundation" and the "Japan Student Services Organization Scholarships". I am very grateful to my supervisor during my master's degree, Prof. Tingli Ma, Kyushu Institute of Technology for her invaluable advice and useful suggestions.

I am very grateful to Dr. S. Torii, Dr. P. Miao and Dr. S. Kawaguchi for the assistance in the neutron and synchrotron X-ray diffraction experiments. I express special thanks to Mr. M. Shiraiwa, Miss H. Kandabashi and Mr. K. Hibino for useful discussion and assistance in the experiments. I acknowledge Daiichi Kigenso Kagaku Kogyo Co., Ltd. for the AAS and ICP-OES measurements. The neutron-diffraction measurements were carried out by the project approval (J-PARC MLF Proposal No. 2017A0111 and 2017L1301). The synchrotron experiments were carried out at SPring-8 (Proposal No. 2017A1803, 2017B1265, 2018A1259, 2018B1056 and 2019A1052). This study was partly supported by Grants-in-Aid for Scientific Research (KAKENHI, No. JP15H02291, JP16H00884, JP16H06293, JP16H06440, JP16H06441, JP16H06438, JP16K21724, JP17K17717, JP17H06222, and JP19H00821) from the Ministry of Education, Culture,

Sports, Science and Technology of Japan and JSPS Core-to-Core Program, A. Advanced Research Networks (Solid Oxide Interfaces for Faster Ion Transport).

Finally, I sincerely appreciate to my wife Dr. Mu Li and my family for encouraging and supporting me in what I always wanted to do. Thanks for their indulgence, tolerance and love all the time. I am particularly grateful for their contributing so much to me.
